Re: Secura Key Part Number Changes

Dear Secura Key Customer,

In the recently issued Secura Key 2009 Price List, we have made significant changes in the part numbering for our cards. The attached spreadsheet shows the 2008 part numbers that have changed, and their 2009 equivalents.

The new card part numbers accurately describe how the card will be manufactured. The card part numbers now consist of a base part number, plus a 1-3 digit manufacturing code separated by a dash (ex: SKC-06-10, SKC-06-6).

We have removed the bit format information from the e\*Tag® part numbers, so you now have to indicate below the line item whether you want 26-bit or 32-bit encoding (just include it with the Facility Code and Card ID information).

Card options like mag stripe, slot punch, photo flap, etc, will now become part of the card part number, instead of being separate line items. Our new software has a configurator or "wizard", which creates the price and final part number automatically, based on the options ordered.

Note that pricing of a card with an option such as photo flap or mag stripe will now be the price of the base card plus the price of the option.

Some cards can have up to 200 option combinations, but the most popular ones are in the price list.

Note that we will still accept and convert orders made with the old part numbers, and if you need the part number for a card with a combination of options not shown here, please call us and we will give you the new part number.

If you have any questions please call Secura Key Customer Service.

Best regards,

A handwritten signature in black ink that reads "Bob Holland". The signature is written in a cursive, flowing style.

Bob Holland
