

UPDATING YOUR SK-NET™ SOFTWARE

With Secura Key access control systems you never have to pay for software updates. We recommend updating SK-NET™ if you need newly added features or if you are experiencing problems with your current version on your computer. To update your system to the latest release, follow these simple instructions.

NOTE: SK-Net-MLD (multi-location, LAN, Dialup). If your current software is the MLD version, you will need to go to Help, Upgrade system, and record the 12 digit serial number. After updating the software, again go to Help, Upgrade system, select MLD and re-enter the serial number into your new SK-Net version.

UPDATE FROM VERSION 2.XX TO 3.XX (LATEST VERSION)

Step 1 Go to our website at www.securakey.com

Select "downloads".

Select "SK-Net Software Version 3.XX" (latest version).

Enter required data.

Step 2 Select "Upgrade from version 2.XX (upgrade your stand alone SK-Net version 2.XX to version 3.XX)".

Step 3 After download is complete, select "RUN" this will start the installation process for your new version.
READ MENUS CAREFULLY!!

Step 4 Once the Install Wizard is complete, launch the "Migration Tool" (This will reformat version 2.XX database files to work with version 3.XX), be sure the "Migration Tool" box is checked and then select "Finish".

Select next, then you need to locate the SK-Net 2.XX folder (default is: C:\Program files\Secura Key\SK-Net2.XX).

Select next, select next again, now select finish (this starts the "Migration Tool"). After the "Migration Tool" has finished the upgrade is complete.

Step 5 Start your new version of SK-NET™ and verify all the data is correct.

Step 6 Before you leave our website, be sure to download the new SK-Net manual version 3.XX.

UPDATE FROM VERSION 3.XX TO 3.XX (LATEST VERSION)

Step 1 Go to our website at www.securakey.com

Select "downloads".

Select "SK-NET™ Software Version 3.XX" (latest version).

Enter required data.

Step 2 Select "Upgrade from version 3.XX (upgrade your stand alone SK-NET™ version 3.XX to version 3.XX)".

Step 3 After download is complete, select "RUN" this will start the installation process for your new version.

Step 4 Follow the prompts and select RUN, select RUN again. This completes the upgrade. Delete the old icon from the desktop.

Step 5 Before you leave our website, be sure to download the new SK-Net manual version 3.XX.

Notes on Version 3.00 or Later

Starting with Version 3.00, SK-Net has client/server capabilities. This means that you can purchase an SK-NET™ license that enables 2 or more workstations to use SK-NET™ at the same time, sharing the databases on a common server. If you want to add these capabilities, you will need to purchase SK-NET-MLD-C/S-2 (or 5, 10, 15). This software will come on a CD, with printed manual.
